

Sustainable Solutions for Health, Productivity and the Environment.

Biological Cleaning

Safer for you and your home.

Biological Cleaning

Rochester Midland is the world leader in environmental cleaning technology, recognized by the White House, EPA, and USDA for biobased cleaning programs that improve health and the environment.

Rochester Midland now offers the most innovative, sustainable cleaning technology for restoration professionals. The Professional Restoration Series (PRS) follows standards set within the housekeeping industry for our Enviro Care® products. PRS biological cleaning solutions meet the most rigid environmental standards available while providing tremendous improvements in health and safety for you and your home.

Not All Bacteria are Bad

A common misconception is that all bacteria are bad. Indeed some are very bad, but in reality only the smallest fraction of bacteria on this planet are pathogenic or cause disease. The majority of bacteria we co-exist with.

These “good” bacteria are engines of biodegradation, converting waste into carbon dioxide and water.

Putting Mother Nature to Work

We are now putting these “good” bacteria to work for us to help with water damage and other restoration cleanup activities. By using bacteria common to all of us in our daily process, we are using the safest ingredients to manage waste and soils common to disaster restoration. They work longer, penetrate porous surfaces, and digest soils and odors at extreme speeds.

Improving Our Environment

You are benefiting from a highly trained restoration professional bringing the industry's most modern, sustainable technology to your home. These biological cleaners are made from renewable resources and will reduce chemical residues left in your home compared to conventional processes. You will also benefit from lower VOC's.
